REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: prior art of record does not describe or suggest applicant's invention set forth in claims 1-4, a method for fabricating an electronic device wherein a dopant is implanted into an area of a semiconductor substrate that is located within a region isolated by a dielectric isolator, a film stack is deposited that includes a first dielectric layer and a first polysilicon layer, and a dielectric window is etched in conjunction with the steps of forming and filling an epitaxial via and the first second and third spacers, in the context of the recited process. Similarly, prior art of record does not describe or suggest the invention of claims 5- 12, an electronic device comprising a semiconductor substrate with at least one region laterally enclosed by a dielectric isolator region, and an epitaxial channel disposed on the topmost surface of an implanted region and electrically coupled to the implanted region, a periphery of the epitaxial channel having been defined by a first dielectric spacer, in the context of the recited device. Finally, prior art of record does not describe or suggest the method of claims 13-18, wherein a dopant is implanted into an area of a semiconductor substrate, a film stack is deposited, a dielectric layer is etched through a first dielectric layer of the film stack, and portions of the film stack are etched forming an epitaxial via, in the context of the recited process.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Cited Prior Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Chu et al. (U.S. Patent No. 5,780,327) teaches a vertical double-gate field effect transistor that includes an epitaxial channel and a stack on a bulk SOI substrate (abstract and title).
